13,30	Lunch

05.02.2020

9,30 – 13,30	Conference at Lazio Region.
--------------	-----------------------------

Minutes of the meeting.

We started the meeting with a brief project assessment from the point of view of each partner and mostly positive aspects related to project results have emerged, particularly with respect to:

- Good integration among different approaches of each partner
- Training test in each country
- Transferability of results and multiplier effect of the project

In the same way, we discussed about the possibility of a second edition of Feel Good project, by extending and involving in the project new partners (for this reason is also important the work of dissemination of results) and by identifying new targets through a brainstorming. Some of the ideas emerged are:

- To deepen the focus on professional figures and services related to mental disability, in particular in the healthcare sector;
- To deepen the focus on the psychiatric field, therefore mostly focusing on the healthcare dimension;
- Focus on managerial figures in the rehabilitation domain.
- Possibility of intertwine the Medical Humanities with the multicultural approach used with migrants in the healthcare sector.

The final decision regarding the modalities of a potential new project proposal will be taken in the following weeks through email dialogue and exchange.

Then, we discussed and agreed on the shape and length of the intervention of each partner at the final conference of the following day, we illustrated the features of the experts called for the round table and explained the modality of translation arranged.

Lastly, we have shared the situation of the financial expense sheet of each partner, identifying eventual documentation (in each partner language) missing with respect to the one planned.

Community of Capodarco requested each partner to send within the month of March all the documentation due. Partners have also been requested to collaborate to the final report due to the EU after the end of the project activities.

Partners visited Community of Capodarco premises, where they have been showed different activities carried out for adult people with physical and/or mental disabilities, including socio-occupational laboratories of Raku ceramic, fresh pasta and 3D printing computer science.
